

## Add a Quicktime Movie to Dreamweaver Page

Make the movie automatically start when the web page opens:

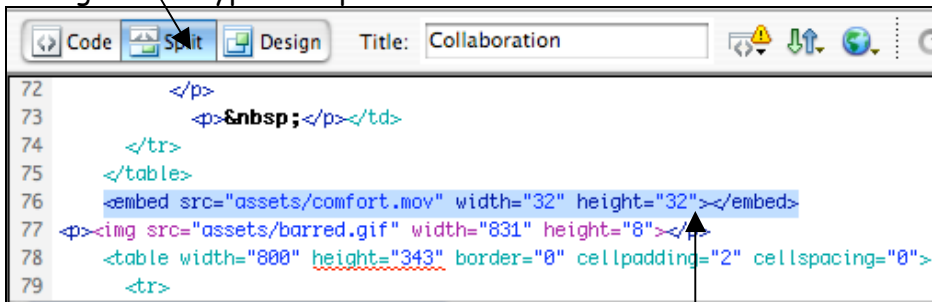

- Open your web page in Dreamweaver and drag the Quicktime Movie onto the page from your Assets Folder.
- You will see a puzzle piece. Resize the puzzle piece to be approximately the size you want your movie to be.
- Preview the movie to see if the control bar shows for playback

If not, make the puzzle piece larger.

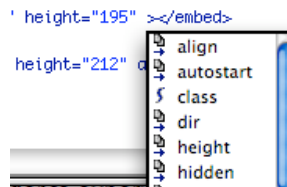

To make the movie not play until the viewer clicks the start button:

- Once the movie has been placed on the web page in Dreamweaver, click on the Split tab to see both the design view and the code view.
- The html code for the movie will be highlighted. Place the cursor in the space after the height" and type one space:

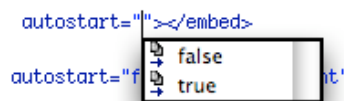

Click after the height" and place one space

This small group of teachers and techies collaborated in figuring out how to actually use this new software in an educational setting. Together we wrote the [directions](#) for

- A drop down menu will appear:
- Double click on Autostart

- Double click on False
- The html code will be altered to add "autostart="false" and the movie will not start until the viewer clicks the start button.
